

ARC-NGF Proof of Concept (PoC): Sidecar R

Adapter → Warp → Detect → Denoise → Execute → Verify (hallucination check)

- Determinism by design: Warp → Detect → Denoise collapses phantoms.
- Registry-driven: add primitives without changing the core.
- Verification closes the loop: zero/near-zero hallucination in ARC regime.
- Lightweight: PCA + filtering; runs on a laptop/edge device.
